Appendix I- RF Exposure statement

Evaluate standard : FCC KDB # 447498 D01 V06

RSS-102 Issue 5

Calculated Output Power

The maximum measured transmitter power is the following:

| | | | 9 | | |
|--|--------------------|---|---|---|--|
| | Frequency [GHz] | Field Strength of Fundamental Emissions | Field Strength of Fundamental Emissions | Field Strength of Fundamental Emissions | |
| | | [dBuv/m] | [dBm] | [mW] | |
| | 0.908433 | 93.562 | -1.67 | 0.681 | |

Note:Relation between power, electric field strength, E

A simple relation can be established for perfect, ideal cases (which means free space, far field conditions) between E(V/m), D distance between the transmitting radio equipment and the point of measurement (m), e.i.r.p.(W).

$$E = \sqrt{\frac{30(e.i.r.p.)}{D}}$$

This represents a site gain of 4dB. The field strength as E(V/m) can be converted to dB(uV/m) as follows:

 $E(dB(uV/m)) = 120 + 20 \log E$

Evaluation for FCC

According to FCC KDB # 447498 D01 V06, Clause 4.3.1

(a) For 100MHz to 6 GHz and test separation distances \leq 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

$$\frac{\text{(max. power of channel, including tune - up tolerance, mW)}}{\text{(min. test separation distance, mm)}} \times \sqrt{f(GHz)}$$

 \leq 3.0, for 1-g SAR, and \leq 7.5, for 10-g extremity SAR

So, the max allowed power for 1-g SAR with distance 5mm at 0.908433GHz is 15.73783mW

And the max allowed power for 10-g extremity SAR with distance 5mm at 0.908433GHz is 39.34457mW

The maximum conducted output power of the EUT is: 0.681mW which is totally lower than the SAR test exclusion thresholds.

Evaluation for IC

According to table 1 and note 4 of RSS-102 Issue 5, March 2015

 ${\bf Table~1:~SAR~evaluation-Exemption~limits~for~routine~evaluation~based} \\ {\bf on~frequency~and~separation~distance}^{4,5}$

| Frequency | | nW) | | | |
|-----------|---------------|---------------|---------------|---------------|---------------|
| (MHz) | At separation |
| | distance of |
| | ≤5 mm | 10 mm | 15 mm | 20 mm | 25 mm |
| ≤300 | 71 mW | 101 mW | 132 mW | 162 mW | 193 mW |
| 450 | 52 mW | 70 mW | 88 mW | 106 mW | 123 mW |
| 835 | 17 mW | 30 mW | 42 mW | 55 mW | 67 mW |
| 1900 | 7 mW | 10 mW | 18 mW | 34 mW | 60 mW |
| 2450 | 4 mW | 7 mW | 15 mW | 30 mW | 52 mW |
| 3500 | 2 mW | 6 mW | 16 mW | 32 mW | 55 mW |
| 5800 | 1 mW | 6 mW | 15 mW | 27 mW | 41 mW |

| Frequency | quency Exemption Limits (mW) | | | | | |
|-----------|------------------------------|---------------|---------------|---------------|---------------|--|
| (MHz) | At separation | At separation | At separation | At separation | At separation | |
| | distance of | distance of | distance of | distance of | distance of | |
| | 30 mm | 35 mm | 40 mm | 45 mm | ≥50 mm | |
| ≤300 | 223 mW | 254 mW | 284 mW | 315 mW | 345 mW | |
| 450 | 141 mW | 159 mW | 177 mW | 195 mW | 213 mW | |
| 835 | 80 mW | 92 mW | 105 mW | 117 mW | 130 mW | |
| 1900 | 99 mW | 153 mW | 225 mW | 316 mW | 431 mW | |
| 2450 | 83 mW | 123 mW | 173 mW | 235 mW | 309 mW | |
| 3500 | 86 mW | 124 mW | 170 mW | 225 mW | 290 mW | |
| 5800 | 56 mW | 71 mW | 85 mW | 97 mW | 106 mW | |

For frequencies (835 MHz to 1900 MHz), the conservative limit of 1900MHz can be used for exemption limits.

So, the max allowed power for 1-g SAR with distance 5mm at 908.433MHz is 7mW

The maximum conducted output power of the EUT is: 0.681mW which is totally lower than the SAR test exclusion thresholds.

Conclusion

SAR data is not required for either FCC or IC.
